

WATHING_COIN

WATHING OVERVIEW

Wathing is a decentralized exchange (DEX) operating on multiple blockchains, primarily the BNB Chain and Solana, providing trading, staking, and other services.

This platform utilizes an Automated Market Maker (AMM) system, allowing users to trade cryptocurrencies directly from their wallets. The WATHING coin supports various platform functions and rewards. Since its launch, it aims to become one of the largest DEXs by trading volume and will later introduce ICOs to include features such as permanent transactions and cross-chain functionality.

TECHNOLOGY

Wathing operates through smart contracts that enable automated trading and liquidity provision. The core technology uses an AMM model, where users trade via liquidity pools instead of traditional order books.

The WATHING APP platform employs various smart contracts, including those for major trading transactions, revenue generation through emojis, and lottery functions for gaming features. Security is maintained through multiple audited smart contracts, time-lock delays, and transaction limit features to protect users.

The WATHING platform expands cross-chain functionality to connect Wathing Coin and its operations across various blockchains like BNB Chain and Solana. Recently added technologies include perpetual contract trading using leverage and enhanced liquidity routing for better trade execution.

TOKENOMICS

WATHING is the core token for swaps on the Wathing APP platform, providing various functionalities. Users can participate in governance and revenue sharing within the platform.

This coin features an enhanced deflationary mechanism and an updated issuance schedule. Regular coin burns occur due to transaction fees, emoji purchases, and IFO (Initial Farm Offerings) participation. Additionally, the Wathing APP platform implements a treasury fee system to sustain long-term development.

Users can increase their earnings through the Farm Booster system, which boosts mining rewards based on Wathing coin holdings. The platform offers both flexible and fixed-period staking systems, allowing users to lock Wathing for up to 52 weeks for higher rewards. The introduction of Wathing also provides governance voting rights and additional reward opportunities.

ROADMAP

Wathing focuses on expanding cross-chain functionality and enhancing user features. Future key developments include:

- Improved governance mechanisms through Wathing
- Expanded cross-chain integration beyond current networks
- Enhanced farming opportunities
- New features for token utility and user participation
- Updates to the lottery system and IFO platform

Security remains a top priority, with continuous audits and system improvements planned. The latest roadmap additions include further development of perpetual trading, enhanced cross-chain liquidity solutions, and new partnership integrations. The Solana-based Wathing Coin is built on a high-performance blockchain capable of processing 65,000 TPS (transactions per second). It features low transaction fees ranging from \$0.002 to \$0.05 and supports cloud mining, allowing users to rent computing power from remote data centers to mine Solana (SOL) tokens. Investing in the ICO offers high-return opportunities.

TEAM

Wathing operates with a decentralized team structure, with multiple contributors overseeing development. Smart contracts are controlled through multi-signature wallets, requiring multiple approvals for major changes.

Key contracts are managed through the operator, injector, and treasury address systems, each with defined roles and responsibilities. The team maintains transparency through the publicly available Wathing APP repository and regular community updates.

Since the release of the initial whitepaper, the development team has expanded, with dedicated teams working on trading, farming, and cross-chain development.

The Wathing Coin project was first proposed in January 2025 by Smith Woo (우승민), CEO of SPORTSWA EQUITY PARTNERS, INC., headquartered in New York, USA. Smith Woo also operates SMITHWA LLC Consulting, based in Washington, D.C.

The marketing of this project is led by Kyu C. Lee (이규창), Marketing Director of SPORTSWA EQUITY PARTNERS, INC. His career history includes:

- Sony Pictures Korea – Supervisor & Head of Marketing
- Sony Pictures – Director of Film Distribution
- Sony Pictures – Vice President
- Sony Pictures – Marketing Department

Today, Solana continues to be developed by numerous global developer communities. The Solana-based Wathing Coin is designed to grow through SNS community-based applications on the Wathing APP platform, with multiple teams working on different aspects of the protocol.
